UP To Set Up 18 New Air Quality Monitoring Stations In ...

A total of 523 manual monitoring stations are being operated across states. Some states have set up additional monitoring stations in cities. However, there is a shortfall in operation as about 1,000 stations with additional continuous ambient air quality monitoring (CAAQM) stations, that report data real time, are required.

All about effective air quality monitoring

If a station is blue , it means that it is a non-automated station and data will only be available following laboratory analysis. (There are only 2 of these stations.) The diamond-shaped markers on the map relate to the Local Monitoring Network. These give an indication of air quality.

air quality

The Division of Air Quality operates a series of monitoring stations throughout the State and deploys a Movable Monitoring Platform for deployment in selected areas. This monitoring network measures pollutants for which national air quality standards have been defined to protect public health. These are known as "Criteria Air Pollutants."
