(Myers Psychology 9e p. 242) Trichromatic (three-color) Theory the theory that the retina contains three different color receptors - one most sensitive to red, one to green, and one to blue- which, when stimulated in combination, can produce the perception of any color.

Chapter 6: Sensation and Perception Flashcards | Quizlet

6.5 Chapter Summary. Person perception helps us make accurate and informed judgments about how other people are likely to respond to us. At the same time we are exercising our person-perception skills on other people, those same people are also using their powers of person perception to form impressions of us.

6.5 Chapter Summary - Principles of Social Psychology

Perception refers to the way sensory information is organized, interpreted, and consciously experienced. Perception involves both bottom-up and top-down processing. Bottom-up processing refers to the fact that perceptions are built from sensory input. On the other hand, how we interpret those sensations is influenced by our available knowledge, our experiences, and our thoughts.
