ENABLING IoT IS WHAT WE DO

IoT or Internet of Things is a set of digitized physical objects that, thanks to different levels of processing, monitoring, analysis and Artificial Intelligence, communicate and interact with each other and with their external environment, even without men's intervention (as in the case of drones, driverless cars and collaborative robots). We too, by transmitting data from our devices, are ...

Why Is IoT so Important? Over the past few years, IoT has become one of the most important technologies of the 21st century. Now that we can connect everyday objects—kitchen appliances, cars, thermostats, baby monitors—to the internet via embedded devices, seamless communication is possible between people, processes, and things.

Sure, IoT takes a lot of the guesswork out of mundane, day-to-day tasks but from a broader perspective and on a deeper level, we are looking at a new dawn in the evolution of society. The internet of things is enabling a huge shift in the way we approach life, reinventing the processes of practically every task we fulfil or every service we touch.
