knowledge feeds into our hydropower feasibility studies to ensure that your project starts on an accurate and realistic foundation

Hydropower Feasibility Study - Renewables First

The turbine system is designed around Net Head and Design Flow. Net Head is the pressure available to the turbine when water is flowing (more on this later), and Design Flow is the maximum amount of Flow the hydro system is designed to accommodate.

An Introduction to Hydropower Concepts and Planning

1. Use long-term flow data (if available) and/or LowFlows hydrological modelling software to produce an estimated flow duration curve for the site.
2. Specify most appropriate turbine type and size.
3. Discuss most suitable location for the hydro system.
4. Outline civil engineering works required.
