Example explained. In the example above, time (22) is greater than 10, so the first condition is false.The next condition, in the else if statement, is also false, so we move on to the else condition since condition1 and condition2 is both false - and print to the screen "Good evening". However, if the time was 14, our program would print "Good day."

Java If ... Else - W3Schools

Statement 1 is executed (one time) before the execution of the code block.. Statement 2 defines the condition for executing the code block.. Statement 3 is executed (every time) after the code block has been executed.. The example below will print the numbers 0 to 4:

Java For Loop - W3Schools

Java Arrays. Arrays are used to store multiple values in a single variable, instead of declaring separate variables for each value. To declare an array, define the variable type with square brackets:

Java Arrays - W3Schools

Get and Set. You learned from the previous chapter that private variables can only be accessed within the same class (an outside class has no access to it). However, it is possible to access them if we provide public get and set methods.. The get method returns the variable value, and the set method sets the value.. Syntax for both is that they start with either get or set, followed by the ...

Example Explained. myMethod() is the name of the method static means that the method belongs to the MyClass class and not an object of the MyClass class. You will learn more about objects and how to access methods through objects later in this tutorial. void means that this method does not have a return value. You will learn more about return values later in this chapter

Java Methods - W3Schools

Java Objects. An object is called an instance of a class. For example, suppose Animal is a class then Cat, Dog, Horse, and so on can be considered as objects of Animal class.. Here is how we can create objects in Java: className object = new className();

Java Class and Objects (With Example)

This page includes java programs on various java topics such as control statements, loops, classes & objects, functions, arrays etc. All the programs are tested and provided with the output. If you new to java and want to learn java before trying out these program, then read my Core Java Tutorials .

Java Programs - Java Programming Examples with Output

Java ArrayList. The ArrayList class is a resizable array, which can be found in the java.util package.. The difference between a built-in array and an ArrayList in Java, is that the size of an array cannot be modified (if you want to add or remove elements to/from an array, you have to create a new one). While elements can be added and removed from an ArrayList whenever you want.
