In analytical chemistry, a standard solution is a solution containing a precisely known concentration of an element or a substance. A known weight of solute is dissolved to make a specific volume. It is prepared using a standard substance, such as a primary standard. Standard solutions are used to determine the concentrations of other

Titration is a process in which small amounts of a reagent are added to a solution until a chemical reaction occurs. The reaction confirms that the solution is at a specific concentration. Primary standards are often used to make standard solutions, solutions with a precisely known concentration.

Before we use any solution in a titration process, all the solutions should be standardized with a primary standard solution. This is because, even though we weigh the exact amount of a compound that is required to prepare a  $0.1 \text{ mol L}^{-1}$  solution, it will not give the
