The Moving Image Workshop Introducing

The Moving Image workshop is packed with project ideas that help students with basic animation principles. It has an easy to follow format that is based on teaching concepts as opposed to technical elements or software. Also, it's packed with examples and stills, so I think it should help students visually as they plan their animated works.

The Moving Image Workshop: Introducing animation, motion ...

"The Moving Image Workshop offers a concise, thorough and realistic approach to creating well thought out and engaging animations. The exercises are invaluable and easily adaptable to the classroom and obviously come from the author's careful study and understanding of prior works in the field as well as her own practice.

Representing movement. A moving object is any identifiable entity that moves and exists independent of other objects (Macedo et al. 2008). Güting and Schneider distinguish between two fundamentally different classes of moving objects: objects that maintain a constant shape while moving (e.g. a human being, a vehicle, an animal) and objects that change their shape (e.g. a

forest fire).

How to compare movement? A review of physical movement ...

Introduction. The retina is the first stage in the mammalian nervous system in which visual motion is computed. Retinal direction-selective (DS) cells preferentially show spiking responses to visual stimuli moving in a particular direction (preferred direction) and show less spiking to the opposite, null direction [].It has been suggested that a key mechanism underlying retinal direction ...
